IDENTIFY CONCERNS

Our main concerns for this website were to:

- Inform students about FCS Classes and FCCLA
 - Educate parents about the positive impacts FCCLA has on students and families throughout our school district
 - Provide a place for all Nashua-Plainfield FCCLA Chapter related questions to be answered
-

SET A GOAL

Our goal is to reach a wide range of students and parents in our school district and to other people visiting our school's website. We also wanted to inform, educate, and provide a useful website to be shared throughout our school at anytime of the day.

FORM A PLAN (WHO, WHAT, WHEN, WHERE, HOW, COST, RESOURCES, AND EVALUATION)

Mekenna Weiss and Hailey Schmitz made a website for the Nashua-Plainfield FCCLA Chapter. We worked on our website beginning in November and continued our work until February first, then in March we found out we made it onto Level 2. Then we worked from then to June thirtieth, our next deadline. We mostly worked at our website together on school grounds either before or after school hours, but the website creator, Weebly, that we used allowed us to work on our website from home separately. We used a free website builder on school laptops, so the cost was nothing for us. We utilized many resources such as the national website, state website, school policies, school personnel, our advisor's paperwork, and pictures that have been taken throughout the year. Our project was a lot more work than we initially intended, but we learned many new skills in building a website for future reference. Throughout this experience we gained several new skills including time management, organization, people skills, creativity, and responsibility.

ACT

We worked several hours which totaled about 15 hours a week and by the end of June, added up between 80-100 hours. We worked on our website together as planned school time, but we also worked on our website at home, and together in our free time. As we worked we continued to make changes and adjust to the new updates on our website creator, Weebly.

FOLLOW UP

If we could change one thing about our project we would have started working on our website earlier. As we began the work on our website we realized that we underestimated the amount of work it would take. As we continued to work we found out that we needed to put a lot more time than we were expecting. We learned so much throughout this STAR Event. Technologically, we feel much more confident in our abilities, such as embedding codes and resolving issues on our own. Our people skills were elevated to a whole new level. We had to work with a handful of distinct personalities and have online discussions and video chats as we tested our skills and explored our options. As we worked we had to endure stressful times. We had to keep moving ahead as we encountered these exasperating experiences, but in the end we knew it would all be worth it.
